

## 300 mA ultra low-noise LDO with Power Good and soft-start

TSOT23-5L

### Features

- Ultra-low output noise: 7.5  $\mu\text{V}_{\text{RMS}}$
- Operating input voltage range: 1.6 V to 5.5 V
- Undervoltage lockout
- Output current up to 300 mA
- Very low quiescent current: 16  $\mu\text{A}$  at no-load
- Controlled  $I_q$  in dropout condition
- Very low dropout voltage: 100 mV at 200 mA, 150 mV at 300 mA
- Very high PSRR: 80 dB @ 100 Hz, 60 dB @ 100 kHz
- Output voltage accuracy: 2% across line, load and temperature
- Output voltage versions: from 1 V to 5 V, with 50 mV step
- Logic-controlled electronic shutdown
- Power Good
- Output discharge feature
- Internal soft-start to limit the in-rush current
- Overcurrent and thermal protections
- Temperature range: from -40 °C to +125 °C
- Package: TSOT23-5L

### Applications

- Smartphones/tablets
- Image sensors
- Instrumentation
- VCO and RF modules
- HDD and SSD
- Portable and other battery powered devices

### Description

The **LDLN030** is a 300 mA very low-dropout voltage regulator, able to work with an input voltage ranging from 1.6 V to 5.5 V.

The typical dropout voltage at 300 mA load is 150 mV.

The very low quiescent current, which is just 16  $\mu\text{A}$  at no load, extends battery-life of applications requiring very long standby time.

Thanks to its ultra low-noise value and high PSRR the device provides a very clean output, suitable for ultra-sensitive loads. It is stable with ceramic capacitors.

The enable logic control function puts the **LDLN030** into shutdown mode allowing a total current consumption lower than 1  $\mu\text{A}$ .

The device also includes short-circuit constant current limiting, undervoltage lockout, soft-start, Power Good and thermal protection.

Typical applications are noise sensitive loads such as ADC, VCO in mobile phones and tablets, wireless lan devices. The **LDLN030** is designed to keep the quiescent

1. V<sub>IN</sub> = V<sub>OUT</sub> + 1 V or 1.6 V, whichever is greater. Not applicable for 5 V output voltage versions.

2. Performance guaranteed by design and/or characterization, and not production tested.

3. Dropout voltage is the input-to-output voltage difference at which the output voltage is 100 mV below its nominal value.

**Note:** Performance guaranteed over the indicated operating temperature range by design and/or characterization, and/or production tested at T<sub>J</sub> = T<sub>A</sub> = 25 °C. Low duty cycle pulse techniques are used during testing to maintain the junction temperature as close to ambient as possible.
