XF Series

The Modular Power Solution of Choice for Hi-Rel COTS Applications

- *Highest Efficiency, Reliability & Power Density*
- *MIL-STD-461F & MIL-STD-810G*
- *-55 °C to 70 °C Operating temperature*
- *47-440Hz Input Frequency*

Hi-Rel COTS

Ruggedised COTS AC/DC Power Supply

Ultra-high efficiency 1U size

PLUG & PLAY POWER
next generation power source

FEATURES

- MIL-STD-810G: Shock & Vibration
- MIL-STD-461F: EMC
- Conformal Coated & Ruggedised as standard
- Operating temperature range of -55/-40 to 70°C
- 47-440Hz input frequency
- Anti-Vibration Compound
- 1V to 58V standard output voltages
- All outputs fully floating
- Extra low profile: 1U height (40mm)
- Ultra high efficiency, up to 91%
- Plug & Play Power
  - allows fast custom configuration
  - Outputs completely field configurable with option to factory fix
- Series / Parallel outputs for higher voltages and currents
- Parallel powerpacs for higher power
- OVP, OTP, OCP as standard
- 5V/250mA bias standby voltage provided
- Individual output control
- 5 Year Warranty
- SEMI F47 Compliant

APPLICATIONS INCLUDE

- Harsh Industrial Electronics
- Radar (Naval, Ground Based)
- Communications
- Test & Measurement

The XF family of power supplies provides up to an incredible 1000W in an extremely compact 1U x 268 x 127mm package. Employing an innovative plug & play architecture the XF family brings unprecedented flexibility that allows users to instantly configure a custom power solution in less than 5 minutes.

Designed for use in harsh operating environments, the XF family is conformal coated and ruggedised to withstand extremes in shock and vibration as well as operation over a wide temperature range of -55/-40 to 70°C. Applications include Harsh Industrial, Test and Measurement, Communications, Fixed and Mobile Radar and Military Electronics which require COTS solutions.

All configurations carry full safety agency approvals, including UL60950 and EN60950 and are fully characterised for EMC according to MIL-STD-461F. All configurations meet the MIL-STD-810G standard for shock and vibration. EMC characterisation, Shock and Vibration and Thermal Stress reports are available.

NOTES.

1. All specifications at nominal input, full load, 25°C unless otherwise stated.
2. This product is not intended for use as a stand alone unit and must be installed by qualified personnel.
3. The specifications contained herein are believed to be correct at time of publication and are subject to change without notice.
4. Derating required below -40 °C.
5. With certain configurations when powering inductive or capacitive loads, it is recommended to use a blocking diode on the output.- consult Excelsys for further detail.
6. An external filter may be required to meet certain conducted and radiated emissions requirements for MIL-STD-461F. For further details contact support@excelsys.com
7. SEMI F47 compliant at input voltages >160VAC. Consult Excelsys for details.
8. Consult Excelsys for module derating at temperatures from -40°C to -55°C.

Voltage Adjustment - Local

The multi-turn potentiometer that adjusts each output within the specified range may be accessed via the output panel of the power supply. Clockwise rotation increases output voltage. Resolution is approximately 5% of nominal voltage (Vnom) per turn. Certain applications may require military grade potentiometer or fixed resistors - consult Excelsys for details.

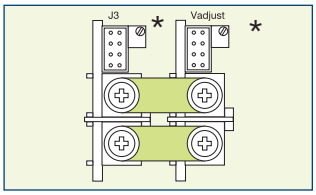
Voltage Adjustment - Remote (resistive / electronic)

The output voltage may be adjusted or trimmed by means of an external resistor or potentiometer network connected to the Vtrim pin. Linear Electronic programming is also possible and may be implemented according to the formula Vout = K Vcontrol.

Parallel Connection

To achieve increased current capacity, simply parallel outputs using the standard parallel links. Excelsys 'wireless' sharing ensures that current hogging is not possible. To parallel connect outputs:

1. Switch on IShare switch to ON on powerMods.
2. Connect Negative parallel link.
3. Adjust output voltages of powerMods to within 5mV of each other.
4. Connect Positive Parallel Link.

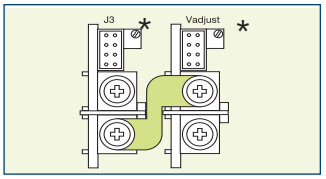


Parallel Links available to order. Part Number XP1

*Certain applications may require military grade potentiometer or fixed resistors - consult Excelsys for details.

Series Connection

To achieve increased output voltages, simply series outputs using standard series links, paying attention to the requirements to maintain SELV levels if required in your system.



Series Links available to order. Part Number XS1

*Certain applications may require military grade potentiometer or fixed resistors - consult Excelsys for details.

Remote Sensing

When the load is remote from the power supply, the remote sense pins may be used to compensate for dynamic impedance effects caused by the power cabling.

Bias Voltage

A SELV isolated 5V (always on) bias voltage rated at 250mA is provided on J2 to facilitate miscellaneous system control functions.

Current Limit Adjustment

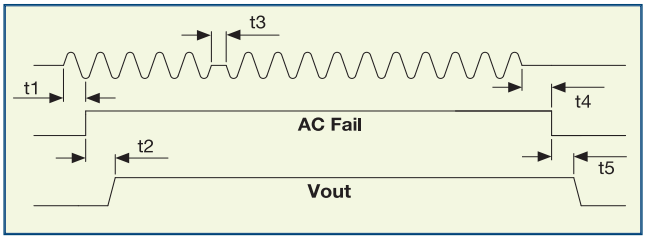
The output current limit setting may be adjusted (downwards only) by means of an external resistor connection to the I trim pin.

Inhibit/Enable

Inhibiting may be implemented either globally or on a per module basis (*powerPac* or *powerMod* inhibiting). Reverse logic (Enabling) may also be implemented.

AC Fail

Open collector signal indicating that the input voltage has failed or is less than 80Vac. This signal changes state giving 5ms of warning before loss of output regulation.

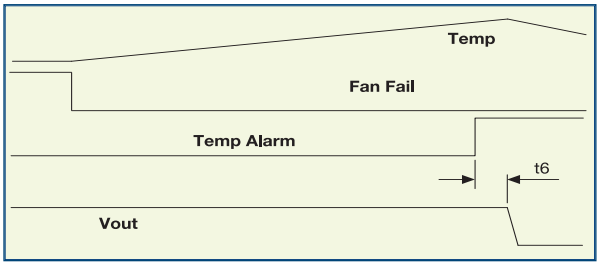


Temperature Alarm (Option 01)

Open collector signal indicating excessive *powerPac* temperatures due to fan failure or operation beyond ratings. This signal is activated at least 10ms prior to system shutdown.

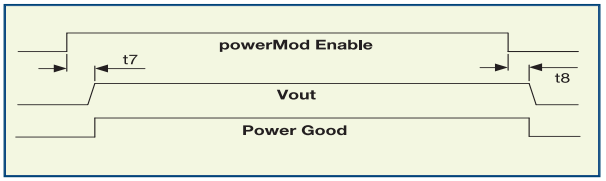
Fan Fail (Option 01)

Open collector signal indicating that at least one of the system fans have failed. This does not cause system shutdown.



Power Good

Opto-isolated output signal indicates that the *powerMod* is operating correctly and output voltage is within normal band.
Opto transistor ON = Good.



Indication LED's

Each *powerMod* has a visual indicator to identify that it is operating within normal ratings. Very useful for system diagnosis.

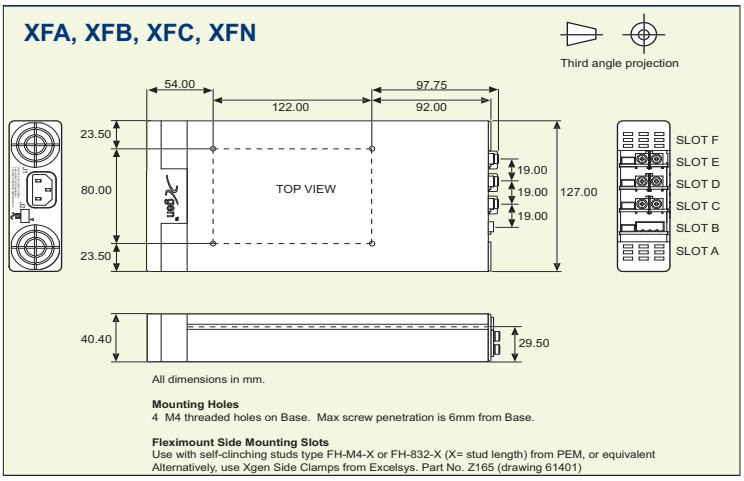
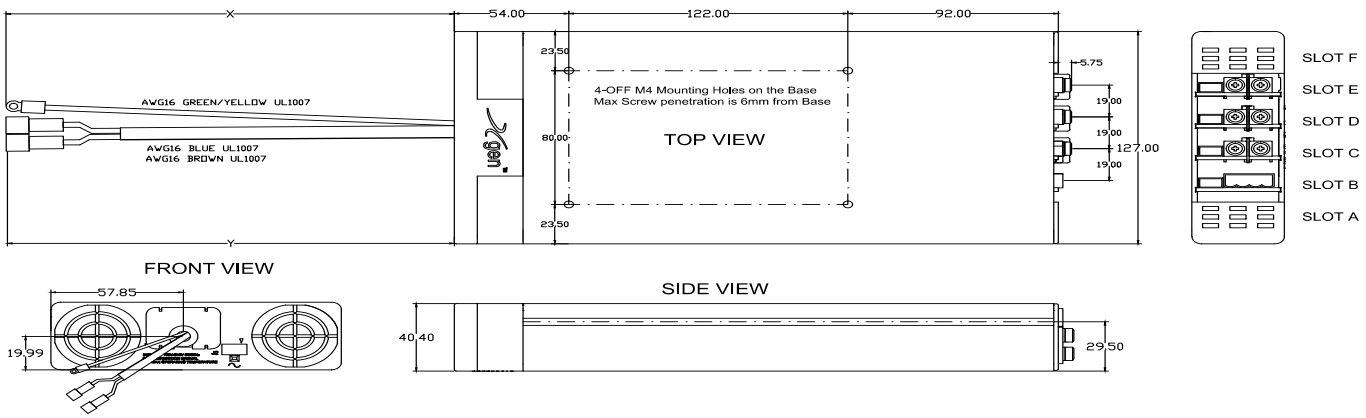
Mechanical Specifications (Standard IEC inlet)

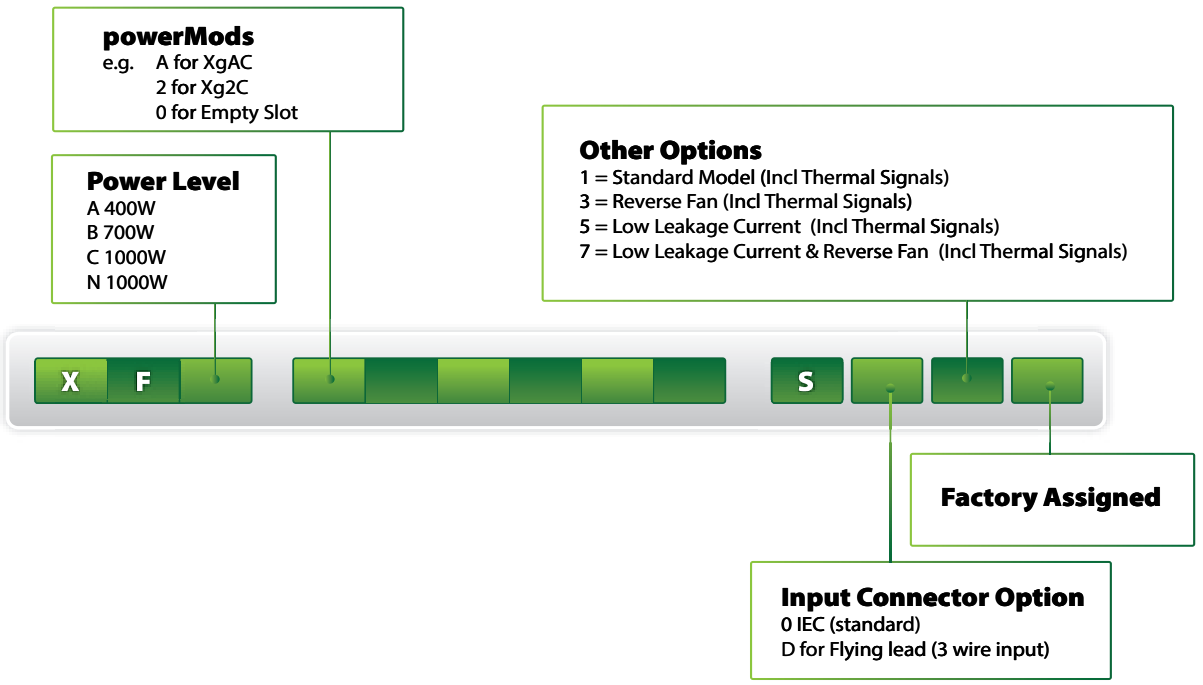


Mechanical Specifications with Input Cable (Option D)

The XF Series is also available with an input cable connection option allowing greater flexibility when mounting the XF in the system. Input cables are 300mm in length and come supplied with Faston connectors (consult Excelsys for alternatives).



Side Mounting Slot works with self clinching stud type PEM - FH-M4-X or type PEM - FH-832-X or similar. X represents the length of the stud.
Alternatively, the Side Mounting Slots may be used with Excelsys Side Clamps (Drawing no. 61401)



Part Numbering

Configured Units may be specified and ordered using the part numbering system shown opposite. For example, part number XFC2DK4BHS01 specifies the following 1000W power supply.

- XFCS01 powerPac 1000W powerPac
- Xg2C 5V @ 4A powerMod
- XgDC 48V @ 4.2A powerMod
- XgKC 24V @ 9.2A powerMod
- Xg4C 24V @ 10A powerMod
- XgBC 24V @ 4.3A powerMod
- XgHC 5V @ 36A powerMod

Accessories

PowerMods can be parallel connected for higher current and series connected for higher voltages. Configured units will have parallel and series links fitted as required.

Powerpac Connector Options

The default AC input connector is IEC however Xgen can also be supplied with a 3-wire input cable.
