CIRCULAR BACKSHELLS

Termination Options For Circular Connectors

For high-performance sealing and strain relief, the ideal mate for a TE Connectivity (TE) connector or molded part in a wiring application, is a TE backshell.

TE supplies a comprehensive range of circular POLAMCO and Raychem backshells that can assist in providing effective strain relief, environmental sealing and electromagnetic interference (EMI)/radio frequency interference (RFI) shielding, helping you meet today's challenges in demanding environments, across many market sectors.

Spin-Coupling Adapters

Spin-coupling adapters are two-part components that have a rotatable coupling nut and a grooved body designed to accommodate lipped-type heat-shrinkable boots.

Spin-couplings with a compatible molded part are used to optimize environmental protection and strain relief of unscreened cable terminations. Cable repairs can often be made without removing the boot.

MULTIPLE CONFIGURATIONS

- Low profile options
- Compatible with many shell sizes and plating finishes
- Wide variety of modification options allow customisation of standard ranges to suit specific requirements

EASY INSTALLATION

- Tool free ranges available
- Simple and fast termination solutions
- Two-part components allow uncoupling for repairs to help eliminate damage to the boot

HIGH-RELIABILITY SOLUTIONS

- Backshells can provide strain-relief and cable support to help prevent bending or overflexing
- Offer individual or overall 360° screening against EMI/RFI interference
- Backshells can offer protection towards the effectiveness of the cable, sealing against water and dirt ingress

Rollback Repair Possible With A Backshell

Many cable repairs are made within 75 mm of the connectors—usually because of a broken pin or wire. By reheating the heat-shrinkable boot and unscrewing the backshell coupling nut, the boot can be “rolled back,” providing access to the rear of the connector for repair. This technique is applicable to spin-coupling backshells utilizing a heatshrink boot.

Selecting A Backshell

TE offers an extensive standard range of backshell styles to suit a wide variety of applications and requirements. These ranges can be extensively customized using an array of plating options, materials and modification codes. Use the product finder on pages 12-13 to select the most suitable standard series for your requirement.

Adapter Code

An alphabetical code is used to identify connectors with similar adapter interfaces. This code is used to determine the backshell family and part number. The table connector interface table on page 9 shows the appropriate code to match a variety of interfaces.

Backshell Part Number

The part number is the sequence of numbers and letters that describes the adapter family (or series), size, angle, material, finish, and modifications. The part numbering system is explained on page 10 for POLAMCO series backshells and on the individual Raychem product pages.

Family/Series

TE offers several families (or series) of backshell products. Each part number begins with a numerical or alphanumeric prefix denoting the specific product family.

Entry Size

Entry size is the diameter of the hole through which the cable enters into the adapter. If unknown, the diameter required can be calculated using the formula shown on page 11.

Shell Size

This is the size of a connector as specified by the connector manufacturer. It is normally a two-digit number between 08 and 24, although certain

connectors are obtainable in either larger or smaller sizes and some use letter codes.

Modifications

Other options (such as extended length, part marking etc) are available and are defined by standard modification codes - listed on pages 7-8. Alongside the standard ranges shown in this brochure, TE also offer custom solutions to fit more exact requirements. Contact the sales office to find out more.

Please refer to the fold out interface page (attached to the reverse cover of this brochure) for interface specific measurements.

Termination Styles

There are a variety of methods for terminating screening braid to backshells, many of which are covered within TE's standard range of backshells shown below.

Tinel Ring
Memory ring shrunk by the application of heat
Used on: TXR

Cone
Braid/Pigtails clamped between cones
Used on: 64/308/HexaShield Series

Band
Band clamped with calibrated tool
Used on: BT/88/AP/DS Series

Mesh Tape
Wraps mesh tape wraps around individual screens to eliminate EMC windows
Used on: KMA Series

Braid Tail
Product supplied with pre-terminated braid tail
Used on: 70 Series

Pre-Fabricated
Backshell with pre-installed braid tail and heatshrink boot. Installed on cable with heat gun.
Used on: KTKK/TAK

Spring
Spring wrapped around braid (without tooling)
Used on: 91 Series

Braid Trap
Braid trapped in loose fitting thread
Used on: 95/77 Series

Material & Plating Codes

Material Description		
POLAMCO	Raychem	
1	A	ALUMINIUM ALLOY 6000 SERIES
2	B	NICKEL ALUMINIUM BRONZE DGS 1043 / NES 833 (MARINE APPLICATIONS)
4	S/K*	STAINLESS STEEL 303 S31 / 304
46	-	STAINLESS STEEL 316 (MARINE APPLICATIONS)
6	S*	STAINLESS STEEL NUT / ALUMINIUM BODY
74	-	PEI (30% GLASS FILLED HIGH TEMPERATURE COMPOSITE) - CURRENTLY AVAILABLE IN STRAIGHT BTH1 & BTF1 RANGES

* HexaShield backshells only. Code B not available for HexaShield backshells

Plating Description					
POLAMCO	Raychem		ROHS Compliant	Conductivity	Environmental Protection
B	B	CADMIUM, OLIVE DRAB OVER ELECTROLESS NICKEL	NO	CONDUCTIVE	500 HRS
C	C	ELECTROLESS NICKEL	YES	CONDUCTIVE	48 HRS
D	G	BLACK ANODISE	YES	NON CONDUCTIVE	500 HRS
J	J	PASSIVATE (STAINLESS STEEL ONLY)	YES	-	-
U	/	UNPLATED CLEAN FINISH NOT SHOT BLASTED	YES	-	-
Z	W	SHOT BLAST FOR NON-REFLECTIVE FINISH (NICKEL ALUMINIUM BRONZE ONLY)	YES	CONDUCTIVE	-
ZB	U	ZINC COBALT OVER ELECTROLESS NICKEL WITH AN OLIVE DRAB CHROMATE CONVERSION	YES	CONDUCTIVE	350 HRS
ZK	-	ZINC COBALT OVER ELECTROLESS NICKEL WITH A BLACK CHROMATE CONVERSION	YES	CONDUCTIVE	350 HRS
ZN	Z	ZINC NICKEL BLACK PASSIVATE OVER ELECTROLESS NICKEL	YES	CONDUCTIVE	500 HRS

These lists are not exhaustive - contact TE for further information

Modification Codes

TE's standard range of backshells can be extensively modified using the codes listed below. Many of these options can be used in combination to create a solution to suit most needs. Consult TE for assistance regarding the use of modification codes.

Suffix		Meaning	Applies to Series	Affects
POLAMCO	Raychem			
TE	F	Internal blue polytetrafluoroethylene (PTFE) coating	All	Finish
TEG	-	Internal green PTFE coating	All (TE & TEG are mutually exclusive)	Finish
TAH	-	Internal PTFE coating, anti-decoupling, hex nut (wire retained)	Replaces codes TE, AD & HEX	Finish
BN	-	Nickel aluminium bronze nut, shot blast finish	Aluminium backshells	Material / finish
ESC	-	ESC style interface	A-interface only	Interface
NGP	-	No grommet profile	Consult engineering for availability	Interface
AD	S	Anti-decoupling	All non-direct coupling	Interface
TD	-	Torque-differential anti-decoupling	All non-direct coupling (AD & TD are mutually exclusive)	Interface
G	P	Coupling nut with grub screw	L and LV interface	Interface
FB	-	Wide body	All - consult engineering for dimensions	Body shape
SE	-	Swept elbow (cast centre section)	All 90° except 96 series *	Body shape
AP	-	Spanner holes in coupling nut	All except AP series, where spanner holes are standard	Nut
FN	-	Coupling nut with flats	All	Nut
HEX	-	Coupling nut hex	All (FN & HEX are mutually exclusive)	Nut
WN	-	Wire-retained nut (hex shape)	All non-direct coupling (WN & HEX are mutually excl.)	Nut
TH	-	Tooth inspection holes in coupling nut	All interfaces with anti-rotation teeth	Nut
W	-	Wire-locking holes in coupling nut	All except A-interface	Nut
NW	-	No wire-locking holes in coupling nut	A-interface only	Nut
WL	-	Drilled-head screws in cable clamp, tangential hole in adaptor body	Backshells with cable clamp	Body
WLT	-	Safety wire holes at all threaded junctions plus drilled head screws in cable clamp	Backshells with cable clamp	Body

* consult TE for availability / available values / dimensions

** xx / xx.x specified in mm

Modification Codes (cont...)

Suffix		Meaning	Applies to Series	Affects
POLAMCO	Raychem			
BS	-	Body strap	All *	Body
F	-	Wrench flats on follower	All *	Body
2F	-	Two flats instead of four	All *	Body
DH	D	Drain holes in follower body	All *	Body
PH	-	Potting hole	All *	Body
PH2	-	Two potting holes, 180° apart	All *	Body
PHG	-	Potting hole + outgassing hole	All *	Body
TB	-	With added boot groove	Backshells without cable clamp	Boot groove
NG	-	No boot groove	Backshells that have a boot groove	Boot groove
ET	ET	Earth tag	BT, 91 & 97 series	Termination
WS	-	Drilled-head screws in cable clamp	Backshells with cable clamp	Cable clamp
CL	-	Clinch nuts in cable clamp	Backshells with cable clamp	Cable clamp
S	-	Short screw modification	Backshells with cable clamp	Cable clamp
TS	-	Telescoping screws	Backshells with cable clamp	Cable clamp
LP	-	Low-profile (non-preferred: use kxx or exx)	90° *	Body shape
RW	-	Reduced weight	*	Body shape
Lxx	-	Non-standard length **	All straight *	Body shape
Cxx	-	Non-standard front length **	All 45° *	Body shape
Dxx	-	Non-standard rear length **	All 45° *	Body shape
Kxx	-	Non-standard front length (to entry c/l) **	All 90° except 96 series *	Body shape
Exx	-	Non-standard can length **	All plug-in style 90° *	Body shape
Fxx	-	Non-standard rear length **	All 90° except 96 series *	Body shape
Bxx	-	Non-standard coupling nut diameter **	All *	Body shape
Txx.x	-	Non-standard throat diameter **	All *	Body shape
CON	-	Conductive o-ring	All backshells with o-rings	O-ring
FS	U	Fluorosilicone o-rings / seals	All backshells with o-rings	O-ring
NIS	N	Nitrile o-ring	All backshells with o-rings	O-ring
VS	V	Fluoroelastomer o-ring	All backshells with o-rings	O-ring
NS	-	No seal	All backshells with o-rings	O-ring

* consult TE for availability / available values / dimensions

POLAMCO Backshell Part Numbering System

91H1 - 17 - 08 - 1 - C - SL - L50 - HE200

Series

Connector interface
Refer to connector interface table - page 9

Angle

1 = Straight 5 = 30°
2 = 45° 7 = 75°
3 = 90° 3C = Cobra Head
4 = 60° 3M = Double Weld 90°

Shell size¹

2-digit* numerical value equal to connector shell size

Entry Size²

Refer to series datasheet - note that some series do not have this field

Material

Refer to material table - page 6

Finish

Refer to finish table - page 6

Series specific option

Refer to series page
Note: there may be multiple fields

Generic modification option

Refer to modification code table - page 7-8
Note: there may be multiple fields

Auxiliary Components Supplied

Refer to individual series

1 - Prefix shell size with F for direct coupling with grommet follower
(available on interfaces A, D, F, H, K, SM, Q, Z)

2 - Replace dash before entry size with T2 or T3 (straight only) for type 2 assembly
(available when entry diameter exceeds throat diameter - see p44 for example)

* exceptions: RM, L, LC, Q interface - refer to connector interface table for correct shell size

Please note that this system does not apply to the TXR and HexaShield backshells - refer to individual product pages for the correct method

Calculating Wire Bundle Diameter

Where it is not possible to physically measure the wire bundle diameter it can be estimated from the individual wire diameters using the following calculation.

When selecting the backshell cable entry size from provided tables, it is a good idea to err on the side of too large, as an undersized cable can always be enlarged with tape or a grommet to fit the cable clamp. When calculating wire bundle diameters, note that the gauge # of the wire describes only the diameter of the metal conductor, and not the overall diameter including insulation and/or braids. Refer to the appropriate wire specification for the actual diameter of the wire for use in the following calculations.

Steps:

1. Determine each type of wire diameter
2. Choose the multiplication factor from table 1 below
3. Calculate the bundle diameter using the following formula:

$$(\text{Bundle Diameter}) = \text{Factor} \times \sqrt{n_1 \times d_1^2 + n_2 \times d_2^2 + n_3 \times d_3^2 + \dots + n_n \times d_n^2}$$

Where $d_1 \dots d_n$ are diameters of each type of wire in the bundle (when using wires from different diameters)
 $n_1 \dots n_n$ the quantity of wires with the same diameter

Factor is chosen in according to the total number of wires in the bundle (TABLE 1)

4. Add thickness of any shielding or jacketing to core wire bundle diameter.

$$(\text{Final OD}) = (\text{Bundle Diameter}) + 2 \times (\text{Shield Thickness}) + 2 \times (\text{Jacket Thickness})$$

Table 1

AP Series

Band Backshell

- Screen termination by standard stainless steel band
- European preferred style, without band retention lip
- Sealing and strain relief of backshell by heat shrink boot
- Banding strap available - see page 50

SPECIFICATIONS

- **Screen Termination:** Overall Screen
- **Strain Relief & Cable Sealing:** Heat Shrink Boot Option
- **Additional Components Required:** Boot, Band

DS Series

Band Strap Backshell

- Individual and overall screen termination by stainless steel band
- Individual screens terminated inside the backshell, close to the connector in order to minimize cross-talk
- Sealing and strain relief
- Banding strap available - see page 50

SPECIFICATIONS

- **Screen Termination:** Overall Screen, Individual or Multiple Screens
- **Strain Relief & Cable Sealing:** Heat Shrink Boot Option
- **Additional Components Required:** Boot, Band

****NOTE**

Max entry applies to straight configuration.
when max entry is exceeded, straight configuration must be ordered as T3 version (see indicator in part number breakdown).
Shell sizes 09 and 11 only exist in T3 version.

Exceeding max entry also affects dimension D in 45° configuration (see D') and rear nut diameter in 45° and 90° configurations (ØB becomes ØB').

All dimensions in MM unless otherwise stated.

91 Series

Spring Backshell

- Tool-free screen termination by stainless steel constant force spring
- Sealing and strain relief of backshell by heat shrink boot
- Standard range - many sizes available from stock

SPECIFICATIONS

- **Screen Termination:** Overall screen, tool-free, reworkable
- **Strain Relief & Cable Sealing:** Heat shrink boot option
- **Additional Components Required:** Boot

64 Series

Cone Backshell

- Individual screen termination using castellated cone
- Sealing and strain relief of backshell by heat shrink boot
- Cable clamp backshell version also available

SPECIFICATIONS

- **Screen Termination:** Individual or multiple screens, tool-free, reworkable
- **Strain Relief & Cable Sealing:** Cable clamp, heat shrink boot option
- **Additional Components Required:** None

HexaShield Backshell

360° Screening Backshell

- Strain relief on each individual cable
- Compact size not exceeding outer diameter of connector
- No degradation of shielding performance

SPECIFICATIONS

- **Screen Termination:** 360° Screening
- **Strain Relief & Cable Sealing:** n/a
- **Additional Components Required:** See note 4, p47

24/25	25	25	25	24	41,0	31,0	41,5	12	17

NOTES:

- Star is not supplied with HexaShield order number 09/08
- The DS option is for a drilled star which is available on sizes 14 to 25 only, this option is to allow unshielded wires to pass through the assembly
- If optional ferrule quantity is selected then 2 stars will be supplied - an outer "split" star and an inner solid star
- Use in conjunction with the ferrules HET-A-0xx, which are purchased separately

All dimensions in MM unless otherwise stated.

Cobra Head

Backshell Modification

MODIFICATION

- Low profile backshell form
- Designed for use with heat shrink boot
- Modular design for ease of cable assembly
- Can be used on many standard range backshells (see opposite page for details)

For AD modification add 4,0 to ØB, C, K and E dimensions

All dimensions in MM unless otherwise stated.

Glossary of Terms

Anti-decoupling

Anti-decoupling backshells incorporate a ratchet in the nut to help reduce the possibility of the backshell decoupling from the connector due to extreme vibration and shock.

Arctic grip

A deep square-form grip, alternative to a knurled grip, particularly on protective covers.

Backshell

Any accessory fitted to the rear thread of a connector, providing strain relief, screen termination and/or cable sealing.

Blanking Cover

Helps to provide environmental protection and EMC shielding to circuitry or shorting loops at the rear of a connector that is to be used as a stand-alone device.

Cobra Head

Low profile split 90° adaptor.

Conduit

Flexible corrugated tubing that provides environmental protection for wiring. Can be used in conjunction with screenbraid and conduit adaptor backshells to provide a fully screened and sealed system.

Connector

Device for electrically connecting wires to each other or to electrical equipment.

Direct-coupling

Direct-coupling backshells do not have a distinct nut, i.e. the entire backshell rotates when the backshell is screwed into place.

Dummy Receptacle

Provides stowage, environmental protection, and EMC shielding for an unmated plug.

EMC

Electromagnetic Compatibility assures the avoidance of interference effects resulting from the unintentional generation, propagation and reception of electromagnetic energy. This can be achieved by properly grounded shielding (screening) or by electronically filtering signals (Filter Connector).

Entry size

Two digits describe the diameter of the hole through which the cable enters into the backshell. Check specific series for details – note that some series such as boot adaptors (97 series) and cable clamps (96 series) do not require the entry size to be stated.

Follower

Refers to the main body of a spin-coupling backshell.

Heat shrink boot

Molded sleeve that joins the cable jacket to a suitable backshell, for purposes of strain-relief and environmental protection. Heat shrink boots shrink to fit and are installed by use of a specialised hot air gun. Adhesive-lined boots and a variety of materials are available.

Heat shrink kit

Backshell with pre-installed heat-shrink boot and optional (internal) overall screen. Enables easy installation whereby boot and 360° screen termination are achieved in one operation by use of hot air gun.

Individual screen

EMC shield (e.g. screenbraid) encompassing an individual wire in a bundle.

Lacing Tape

Lacing cord used as a binding medium to indicate an EMC classification of an open wiring harness.

Overall screen

EMC shield (e.g. screenbraid) encompassing entire wire bundle.

Protective Cover

Provides environmental protection and EMC shielding on the front (mating end) of an unmated connector.

RoHS

The RoHS Directive bans the placing on the EU market of new electrical and electronic equipment containing more than agreed levels of lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE) flame retardants.

Screenbraid

Flexible EMC shield in expanding sleeve form for covering cable.

Shell size

Two numerical digits that state the size of the connector.

Shield

See EMC

Spin-coupling

Spin-coupling backshells have a coupling nut that rotates freely on the backshell body.

Strain relief

Any method of relieving the strain on the individual wires, should the cable be put under tension. Common methods are cable clamps, heatshrink boots, tie posts.

LET'S CONNECT

We make it easy to connect with our experts and are ready to provide all the support you need. Just call your local support number or visit www.te.com/industrial to chat with a Product Information Specialist.
