Description

The half-brick RPA100H series DC/DC converter is designed for railway rolling stock and high voltage battery applications. It has a 10:1 input voltage range to cover all input voltages from nominal 24VDC up to 110VDC in a single product (including EN50155 transients) and offers isolated and regulated 12V, 15V, 24V or 48VDC outputs. The converter has a consistently high efficiency over the entire input voltage range and comes with a metal baseplate to permit a wide operating temperature range from -40°C to +97°C (when baseplate cooled). The case is fitted with threaded inserts to allow secure mounting to the PCB or bulkhead for use in high shock and vibration environments. The converter is certified to UL/IEC/EN60950 and comes with a three year warranty.

Input Voltage Range

Continuous full power operation is rated between 16.5V and 140V, including full load start-up.

Once running, the converter will operate for short periods of time over an extended input voltage range down to 14.4V and up to 156V, thus covering all EN50155 under-voltage and over-voltage transient conditions.

UNDER VOLTAGE LOCKOUT ADJUSTABILITY

The RPA100H series has an adjustable under voltage lockout which will shut down the converter according to following settings.

Nom. Input Voltage [VDC]	24	36	48	72	110
Turn Off Threshold [VDC]	14±0.4V	21±0.5V	28.5±0.5V	43±1V	65.5±2V

OUTPUT VOLTAGE TRIMMING

Output Voltage Trimming

RPA100H-RUW converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. The values for trim resistors shown in trim tables below are according to standard E96 values; therefore, the specified voltage may slightly vary; they also can be calculated with below shown equation.

V_{out_nom} = nominal output voltage [VDC]
 ΔV_{out} = output voltage change [%]
 V_{ref} = reference voltage [VDC]
 R_{up} = trim up resistor [Ω]
 R_{down} = trim down resistor [Ω]
 $R_1 - R_3$ = internal resistors [Ω]

V_{out_nom}	R_1	R_2	R_3	V_{ref}
12VDC	10k2 Ω	45k Ω	40k Ω	5.11VDC
15VDC		57k4 Ω	52k3 Ω	
24VDC		95k Ω	90k Ω	
48VDC		195k Ω	190k Ω	

Calculation:

$$R_{up} = \left[\frac{R_2}{\Delta V_{out}} \right] - R_3$$

$$R_{down} = \left[\frac{V_{ref}}{\Delta V_{out}} \right] - R_1$$

Practical Example RPA100H-12SRUW trim up +10%

$$R_{up} = \left[\frac{45k}{0.1} \right] + 40k = 490k\Omega$$

$$R_{up} \text{ according to E96} \approx \underline{487k\Omega}$$

Practical Example RPA100H-12SRUW trim down -8%

$$R_{down} = \left[\frac{5.11}{0.08} \right] - 10k2 = 53k6\Omega$$

$$R_{down} \text{ according to E96} \approx \underline{53k6\Omega}$$

EXTERNAL CAPACITOR

A 240µF/200V capacitor (C2) is required for normal operation. To meet power supply interruptions, an external circuit comprised of a capacitor (C1), a 100Ω/1W resistor (R1), a 200V/3A diode (D1) and a 3R/1W resistor (R2) is required.

For 30ms	4800µF	4800µF	4800µF	4800µF	2460µF	1680µF

ON/OFF CONTROL

For negative logic, if the remote on/off feature is not used, short the on/off pin to -Vin.

For positive logic, if the remote on/off feature is not used, leave the on/off pin floating.

REMOTE SENSE

The output voltage can be adjusted by both trim and remote sense. The maximum combined adjustment range is ±10%. Derate the maximum output power if using the trim or sense function to increase the output voltage.
